PARTS ORDERING PROCEDURES

- Dealer account number
- Dealer name and address
- Shipping address (if different than billing address)
- Return fax number
- Applicable model number
- Quantity, part number and description of each part
- Specify preferred method of shipment:
 - UPS Ground
 - UPS Second Day or Third Day*
 - UPS Next Day*
 - Federal Express Priority One (please provide us with your Federal Express account number)*
 - Airborne Express*
 - Truck or parcel post

*Normally shipped the same day the order is received, if prior to 2PM west coast time.

Earn Extra Discounts when you order by FAX!

All parts orders which include complete part numbers and are received by fax qualify for the following extra discounts:

| Number of | | |
|--------------------|--|--|
| line items ordered | | |
| 1-9 items | | |
| 10+ items** | | |

Additional Discount 3% 5%

Get special freight allowances when you order 10 or more line items via FAX!**

- UPS Ground Service at no charge for freight
- PS Third Day Service at one-half of actual freight cost

No other allowances on freight shipped by any other carrier.

**Common nuts, bolts and washers (all items under \$1.00 list price) do not count towards the 10+ line items.

DISCOUNTS ARE SUBJECT TO CHANGE

Fax order discount and UPS special programs revised June 1, 1995

DCA-100SSJU — PARTS AND OPERATION MANUAL (STD)— REV. #2 (05/03/01) — PAGE 5

CAUTION:

Failure to follow instructions in this manual may lead to serious injury or even death! This equipment is to be operated by trained and qualified personnel only! This equipment is for industrial use only.

The following safety guidelines should always be used when operating the DCA-100SSJU portable generator:

GENERAL SAFETY

required by the job.

- **DO NOT** operate or service this equipment before reading this entire manual.
- This equipment should not be operated by persons under 18 years of age.
- NEVER operate this equipment when not feeling

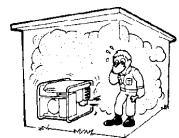

well due to fatigue, illness or taking medicine.

- **NEVER** operate this equipment under the influence or drugs or alcohol.
- NEVER use accessories or attachments, which are not recommended by MQ Power for this equipment. Damage to the equipment and/or injury to user may result.
- Manufacturer does not assume responsibility for any accident due to equipment modifications.
- Whenever necessary, replace nameplate, operation and safety decals when they become difficult read.
- Always check the machine for loosened threads or bolts before starting.

■NEVER touch the hot exhaust manifold, muffler or cylinder. Allow these parts to cool before servicing engine or generator.

- High Temperatures Allow the engine to cool before adding fuel or performing service and maintenance functions. Contact with hot components can cause serious burns.
- The engine of this generator requires an adequate free flow of cooling air. Never operate the generator in any enclosed or narrow area where free flow of the air is

restricted. If the air flow is restricted it will cause serious damage to the generator or engine and may cause injury to people. The generator engine gives off DEADLY carbon monoxide gas.

CAUTION:

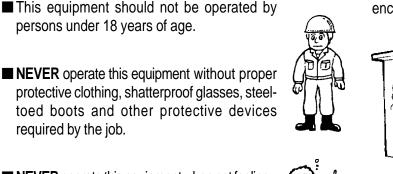

Always refuel in a well-ventilated area, away from sparks and open flames.

Always use extreme caution when working with flammable liquids. When refueling, stop the engine and allow it to cool. DO NOT smoke around or near the machine. Fire or explosion could result from fuel vapors, or if fuel is spilled on a hot engine.

NEVER operate the generator in an explosive atmosphere or near combustible materials. An explosion or fire could result causing severe bodily harm or even death.

Topping-off to filler port is dangerous, as it tends to spill fuel.

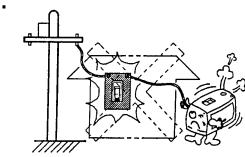

CAUTION:

■ NEVER touch output terminals during operation. This is extremely dangerous. Always stop the machine when contact with the output terminals is required.

CAUTION:

Backfeed to a utility system can cause electrocution and.or property damage. Do not connect to any building's electrical system except through an approved device or after building main switch is opened.

CAUTION:

■ Never use damaged or worn cables when connecting power tools or equipment to the generator. Make sure power connecting cables are securely connected to the generator's output terminals, insufficient tightening of the terminal connections may cause damage to the generator and electrical shock.

CAUTION:

DO NOT touch or open any of the below mentioned components while the generator is running. Always allow sufficient time for the engine and generator to cool before performing maintenance.

Radiator

 Radiator Cap - Removing the radiator cap while the engine is hot will result in high pressurized, boiling water to gush out of the radiator, causing severe scalding to any persons in the general area of the generator.

- Coolant Drain Plug Removing the coolant drain plug while the engine is hot will result in hot coolant to gush out of the coolant drain plug, therefore causing severe scalding to any persons in the general area of the generator.
- 3. Engine Oil Drain Plug Removing the engine oil drain plug while the engine is hot will result in hot oil to gush out of the oil drain plug, therefore causing severe scalding to any persons in the general area of the generator.

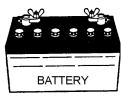

Battery

CAUTION:

Never over fill the battery with water above the upper limit.

The battery contains acids that can cause injury to the eyes and skin. To avoid eye irritation, always wear safety glasses. Use well insulated gloves when picking up the battery. Use the following guidelines when handling the battery:

- 1. **DO NOT** drop the battery. There is the possibility of risk that the battery may explode.
- 2. **DO NOT** expose the battery to open flames, sparks, cigarettes etc. The battery contains combustible gases and liquids. If these gases and liquids come in contact with a flame or spark, an explosion could occur.
- 3. Always keep the battery charged. If the battery is not charged a buildup of combustible gas will occur.
- 4. Always keep battery charging and booster cables in good working condition. Repair or replace all worn cables.
- 5. Always recharge the battery in an open air environment, to avoid risk of a dangerous concentration of combustible gases.
- In case the battery liquid (dilute sulfuric acid) comes in contact with *clothing or skin*, rinse skin or clothing immediately with plenty of water.
- 7. In case the battery liquid (dilute sulfuric acid) comes in contact with your **eyes**, rinse eyes immediately with plenty of water, then contact the nearest doctor or hospital, and seek medical attention.

- NEVER Run engine without air filter. Severe engine damage may occur.
- Always service air cleaner frequently to prevent carburetor malfunction.
- Always disconnect the battery before performing service on the generator.
- Always be sure the operator is familiar with proper safety precaution s and operations techniques before using generator.
- Always store equipment properly when not in use. Equipment should be stored in a clean, dry location out of the reach of children.
- DO NOT leave the generator running in the manual mode unattended.
- **DO NOT** allow unauthorized people to operate this equipment.
- Always read, understand, and follow procedures in Operator's Manual before attempting to operate equipment.
- Refer to the *John Deere Engine Owner's Manual* for engine technical questions or information.

Loading and Unloading (Crane)

- Before lifting, make sure the generator's lifting hook is secure and that there is no apparent damage to the generator itself (loose screws, nuts and bolts). If any part is loose or damaged, please take corrective action before lifting.
- Always drain fuel prior to lifting.
- Always make sure crane or lifting device has been properly secured to the hook of guard frame on generator.
- **NEVER** lift the machine while the engine is running.
- Use adequate lifting cable (wire or rope) of sufficient strength.
- When lifting the generator, always use the balanced center-point suspension hook and lift straight upwards.
- NEVER allow any person or animal to stand underneath the machine while lifting.
- When loading the generator on a truck, be sure to use the front and back frame bars as a means to secure the generator during transport.

Transporting

- Always shutdown engine before transporting.
- Tighten fuel tank cap securely.
- Drain fuel when transporting generator over long distances or bad roads.
- Always tie-down the generator during transportation by securing the generator.
- If generator is mounted on a trailer, make sure trailer complies with all local and state safety transportation laws. See page 10 for basic towing procedures.

Emergencies

Always know the location of the nearest *fire extinguisher* and *first aid kit*. Know the location of the nearest telephone. Also know the phone numbers of the nearest *ambulance*, *doctor* and *fire department*.

Maintenance Safety

- NEVER lubricate components or attempt service on a running machine.
- Always allow the machine a proper amount of time to cool before servicing.
- Keep the machinery in proper running condition.
- Fix damage to the machine immediately and always replace broken parts.
- Dispose of hazardous waste properly. Examples of potentially hazardous waste are used motor oil, coolant, fuel, and fuel filters.
- DO NOT use plastic containers to dispose of hazardous waste.
- **DO NOT** pour waste, oil, coolant or fuel directly onto the ground, down a drain or into any water source.

Towing Safety Precautions

CAUTION:

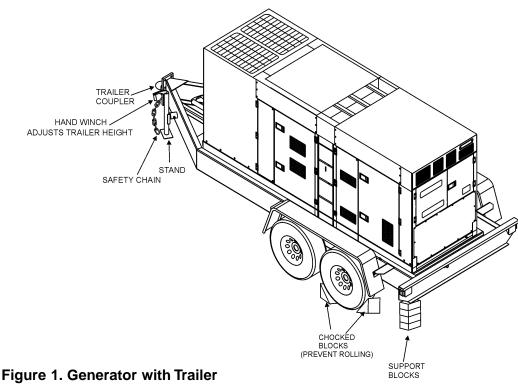

Check with your county or state safety towing regulations department before towing your generator.

To reduce the possibility of an accident while transporting the generator on public roads, always make sure the trailer (Figure 1) that supports the generator and the towing vehicle are in good operating condition and both units are mechanically sound.

The following list of suggestions should be used when towing your generator:

- Make sure the hitch and coupling of the towing vehicle are rated equal to, or greater than the trailer "gross vehicle weight rating" (GVWR).
- ALWAYS inspect the hitch and coupling for wear. NEVER tow a trailer with defective hitches, couplings, chains etc.
- Check the tire air pressure on both towing vehicle and trailer. Also check the tire tread wear on both vehicles.
- ALWAYS make sure the trailer is equipped with a "Safety Chain".

- ALWAYS attach trailer's safety chain to bumper of towing vehicle.
- ALWAYS make sure the vehicle and trailer directional, backup, brake, and trailer lights are connected and working properly.
- The maximum speed for highway towing is **45 MPH** unless posted otherwise. Recommended off-road towing is not to exceed **10 MPH** or less depending on type of terrain.
- Place chocked blocks underneath wheel to prevent rolling, while parked.
- Place support blocks underneath the trailer's bumper to prevent tipping, while parked.
- Use the trailer's hand winch to adjust the height of the trailer, then insert locking pin to lock wheel stand in place, while parked.
- Avoid sudden stops and starts. This can cause skidding, or jack-knifing. Smooth, gradual starts and stops will improve gas milage.
- Avoid sharp turns to prevent rolling.
- Remove wheel stand when transporting.
- **DO NOT** transport generator with fuel in tank.

PAGE 10 - DCA-100SSJU - PARTS AND OPERATION MANUAL (STD) - REV. #2 (05/03/01)

DCA-100SSJU — TRAILER-SAFETY GUIDELINES

CAUTION:

ALWAYS make sure the trailer is in good operating condition. Check the tires for proper inflation and wear. Also check the wheel lug nuts for proper tightness.

Explanation of Chart:

This section is intended to provide the user with trailer service and maintenance information. The service and maintenance guidelines referenced in this section apply a wide range of trailers. Remember periodic inspection of the trailer will ensure safe towing of the equipment and will prevent damage to the equipment and personal injury.

It is the purpose of this section to cover the major maintenance components of the trailer. The following trailer components will be discussed in this section:

- Brakes
- Tires
- Lug Nut Torquing
- Suspension
- Electrical
- Brake Troubleshooting Tables

Use the following definitions while reading Table 1.

- 1. **Fuel Cell -** Provides an adequate amount of fuel for the equipment in use. Fuel cells must be empty when transporting equipment.
- 2. **Braking System -** System employed in stopping the trailer. Typical braking systems are electric, surge, hydraulic, hydraulic-surge and air.
- GVWR- Gross Vehicle Weight Rating (GVWR), is the maximum number of pounds the trailer can carry, including the fuel cell (empty).
- 4. **Frame Length -** This measurement is from the ball hitch to the rear bumper (reflector).
- 5. **Frame Width -** This measurement is from fender to fender.
- 6. **Jack Stand -** Trailer support device with maximum pound requirement from the tongue of the trailer.

- 7. Coupler Type of hitch used on the trailer for towing.
- 8. **Tire Size -** Indicates the diameter of the tire in inches (10,12,14, etc.), and the width in millimeters (175,185,205, etc.). The tire diameter must match the diameter of the tire rim.
- 9. **Tire Ply -** The tire ply (layers) number is rated in letters; 2-ply,4-ply,6-ply, etc.
- 10. Wheel Hub The wheel hub is connected to the trailer's axle.
- 11. **Tire Rim -** Tires are mounted on a tire rim. The tire rim must match the size of the tire.
- Lug Nuts Used to secure the wheel to the wheel hub. Always use a torque wrench to tighten down the lug nuts. See Table 4 and Figure 5 for lug nut tightening and sequence.
- Axle Indicates the maximum weight the axle can support in pounds, and the diameter of the axle expressed in inches (see Table 3 on page 17). Please not that some trailers have a double axle. This will be shown as 2-6000 lbs., meaning two axles with a total weight capacity of 6000 pounds.
- 14. **Suspension -** Protects the trailer chassis from shock transmitted through the wheels. Types of suspension used are leaf, Q-flex, and air ride.
- 15. **Electrical -** Electrical connectors (looms) are provided with the trailer so the brake lights and turn signals can be connected to the towing vehicle. See page 16 for proper wiring connections.
- 16. **Application -** Indicates which units can be employed on a particular trailer.

DCA-100SSJU — TRAILER BRAKING SYSTEM

Brakes

If your trailer has a braking system, the brakes should be inspected the first 200 miles of operation. This will allow the brake shoes and drums to seat properly. After the first 200 mile interval, inspect the brakes every 3,000 miles. If driving over rough terrain, inspect the brakes more frequently.

Electric Brakes

Electrically actuated brakes (Figure 2) are similar to hydraulic brakes. The basic difference is that hydraulic brakes are actuated by an electromagnet.

Listed below are some of the advantages that electric brakes have over hydraulic brakes:

- An electric brake system can be manually adjusted to provide the corrected braking capability for varying road and load conditions.
- An electric brake system can be modulated to provide more or less braking force, thus easing the brake load on the towing vehicle.
- An electric brake system has very little lag time between the time the vehicle's brakes are actuated and the trailer's brakes are actuated.
- An electric brake system can provide an independent emergency brake system.

Road testing is necessary in order to properly synchronize the towing vehicle's braking to the trailer's braking. Brake lockup, grabbiness, or harshness is due to lack of synchronization between the tow vehicle and the trailer being towed or under-adjusted brakes.

Before any brake synchronizations adjustments can be made, the trailer brakes should be burnished-in by applying the brakes 20-30 times with approximately a 20 m.p.h. decrease in speed, e.g. 40 m.p.h. to 20 m.p.h.. Allow ample time for brakes to cool between application. This allows the brake shoes to slightly be seated into the brake drum surface.

Figure 2 displays the major electric brake components that will require inspection and maintenance. Please inspect these components as required. Refer to Table 5 for electric brake troubleshooting guidelines.

Electric Brake Adjustment

- 1. Place the trailer on jack stands. Make sure the jack stands are placed on secure level ground.
- 2. Check the wheel and drum for free rotation.
- 3. Remove the adjusting hole cover from the adjusting slot at the bottom brake backing plate.
- 4. With a screwdriver or standard adjusting tool, rotate the star wheel of the adjuster assembly to expand the brake shoes.
- 5. Adjust the brake shoes outward until the pressure of the lining against the wheel drum makes the wheel difficult to turn.
- 6. Rotate the star wheel in the opposite direction until the wheel rotates freely with slight lining drag.
- 7. Replace the adjusting hole cover and lower the trailer to the ground.
- 8. Repeat steps 1 through 6 on the remaining brakes.

DCA-100SSJU — TRAILER BRAKING SYSTEM

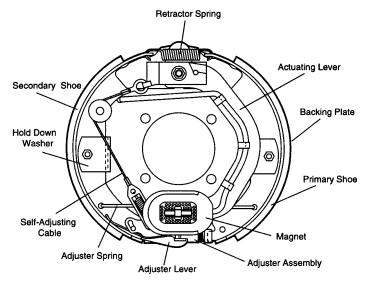

Figure 2. Electrical Brake Components

Hydraulic/Air/Surge Brakes

Hydraulic brakes (Figure 3) should not require any special attention with the exception of routine maintenance such as shoe and lining replacement. These brakes can be adjusted in the same manner as electric brakes. Brake lines should be periodically checked for cracks, kinks, or blockage.

Figure 3 below displays the major hydraulic/air/surge brake components that will require inspection and maintenance. Inspect these components as required using steps 1 through 6 as referenced in the electric brake adjustments section. Reference Table 6 for hydraulic brake troubleshooting guidelines.

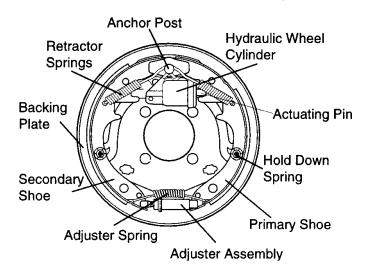

Figure 3. Hydraulic Brake Components

DCA-100SSJU — PARTS AND OPERATION MANUAL (STD)— REV. #2 (05/03/01) — PAGE 15

DCA-100SSJU — TRAILER TIRES & SUSPENSION

Tires/Wheels/Lug Nuts

Tires and wheels are a very important and critical components of the trailer. When specifying or replacing the trailer wheels it is important the wheels, tires, and axle are properly matched.

CAUTION:

DO NOT attempt to repair or modify a wheel. DO NOT install an inner tube to correct a leak through the rim. If the rim is cracked, the air pressure in the inner tube may cause pieces of the rim

to explode (break off) with great force and cause serious eye or bodily injury.

| TABLE 2. TIRE WEAR TROUBLESHOOTING | | | |
|------------------------------------|-------------|------------------------------------|---|
| WEAR P | ATTERN | CAUSE | SOLUTION |
| | Center Wear | Over Inflation. | Adjust pressure to particular load per tire manufacturer. |
| | Edge Wear | Under Inflation. | Adjust pressure to particular load per tire manufacturer. |
| | Side Wear | Loss of chamber or overloading. | Make sure load does not exceed axle rating. Align wheels. |
| | Toe Wear | Incorrect toe-in. | Align whee s. |
| | Cupping | Out-of-balance. | Check bearing adjustment and balance tires. |
| | Flat Spots | Wheel lockup & tire skidding. | Avoid sudden stops when possible and adjust brakes. |

Suspension

The leaf suspension springs and associated components (Figure 4) should be visually inspected every 6,000 miles for signs of excessive wear, elongation of bolt holes, and loosening of fasteners. Replace all damaged parts (suspension) immediately. Torqued suspension components as detailed in Table 3.

Tire Wear/Inflation

Tire inflation pressure is the most important factor in preserving tire life. Pressure should be checked cold before operation. **DO NOT** bleed air from tires when they are hot. Check inflation pressure weekly to insure the maximum tire life and to prevent premature tread wear.

Table 2 (Tire Wear Troubleshooting) will help pinpoint the causes and solutions of tire wear problems.

CAUTION: ALWAYS wear safety glasses when removing or installing force fitted parts. Failure to comply may result in serious injury. SHACK SHACK

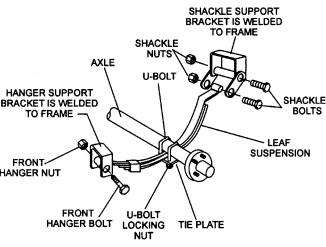

Figure 4. Suspension Components

| SHOULDER TYPE SHACKLE BOLT | MIN-30 MAX-50 | | |

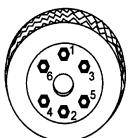

Lug Nut Torque Requirements

It is extremely important to apply and maintain proper wheel mounting torque on the trailer. Be sure to use only the fasteners matched to the cone angle of the wheel. Proper procedure for attachment of the wheels is as follows:

- 1. Start all wheel lug nuts by hand.
- Torque all lug nuts in sequence. See Figure 5. DO NOT torque the wheel lug nuts all the way down. Tighten each lug nut in 3 separate passes as defined by Table 4.
- 3. After first road use, retorque all lug nuts in sequence. Check all wheel lug nuts periodically for continued safe operation.

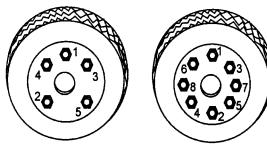

| Table 4. Tire Torque Requirements | | | | | |
|-----------------------------------|----------------------|-----------------------|----------------------|--|--|
| Wheel Size | First Pass FT-LBS | Second Pass FT-LBS | Third Pass FT-LBS | | |
| 12" | 20-25 | 35-40 | 50-65 | | |
| 13" | 20-25 | 35-40 | 50-65 | | |

DCA-100SSJU — GENERATOR DECALS

The DCA -100SSJU generator is equipped with a number of safety decals. These decals are provided for operator safety and maintenance information. The illustration below and on the preceding pages show the decals as they appear on the machine. Should any of these decals become unreadable, replacements can be obtained from your dealer.

DCA-100SSJU - PARTS AND OPERATION MANUAL (STD)- REV. #2 (05/03/01) - PAGE 23

DCA-100SSJU — GENERAL INFORMATION

DCA-100SSJU FAMILIARIZATION

Generator

The MQ Power Model DCA-100SSJU is a 80 kW *generator* that is designed as a high quality portable (requires a trailer for transport) power source for telecom sites, lighting facilities, power tools, submersible pumps and other industrial and construction machinery.

Engine Operating Panel

The "Engine Operating Panel" is provided with the following:

- Tachometer
- Water Temperature Gauge
- Oil Pressure Gauge
- Charging Ammeter Gauge
- Fuel level gauge
- Engine Speed Switch
- Pre-Heat Button
- Emergency Stop Button
- Battery Switch
- Panel Light
- Panel Light Switch
- Auto Start/Stop Controller

Generator Control Panel

The "Generator Control Panel" is provided with the following:

- Output Voltage Adjustment Knob
- Frequency Meter (Hz)
- AC Ammeter (Amps)
- AC Voltmeter (Volts)
- Ammeter Change-Over Switch
- Voltmeter Change-Over Switch
- Pilot Lamp

Output Terminal Panel

The "Output Terminal Panel" is provided with the following:

- Three 120/240V output receptacles, 50 amp
- Two 120V input receptacles, 20 amp
- 3 Load Circuit Breakers 250V @50 amps
- 2 Load GFCI Circuit Breakers 120V@ 20amps

Control Box

The "Control Box" is provided with the following:

- Main Circuit Breaker 250 amps
- Over-Current Relay

Open Delta Excitation System

The DCA-100SSJU generator is equipped with the state of the art "*Open-Delta*" excitation system. The open delta system consist of an electrically independent winding wound among stationary windings of the AC output section.

There are four leads: A, B, C and D. During light loads, the power to the *Automatic Voltage Regulator* (AVR) is supplied from the leads parallel connections of B&C. When loads increase, the AVR switches and accepts power from leads A&D. The output of leads A&D increase proportionally with load. This of adding the voltages to each phase provides better voltage response during heavy loads.

The connections of the AVR to the AC output windings are for sensing only. No power is required from these windings.

The open-delta design provides virtually unlimited excitation current, offering maximum motor starting capabilities. The excitation does not have a "*fixed ceiling*" and responds according the demands of the required load.

Engine

The **DCA-100SSJU** is powered by a 4 cycle, water cooled, turbocharged JOHN DEERE 6068 TF 150 *diesel* engine. This engine is designed to meet every performance requirement for the generator. Reference Table 1, page 13 for engine specifications.

In keeping with Multiquip's policy of constantly improving its products, the specifications quoted herein are subject to change without prior notice.

The basic controls and indicators for the DCA-100SSJU generator are addressed on the following pages.

Mechanical Governor System

The mechanical governor system control the RPM of the engine. When the engine demands increase or decrease, the mechanical governor system regulates the frequency variation to $\pm 1.5\%$. The electronic governor option increases frequency variation to $\pm 0.25\%$.

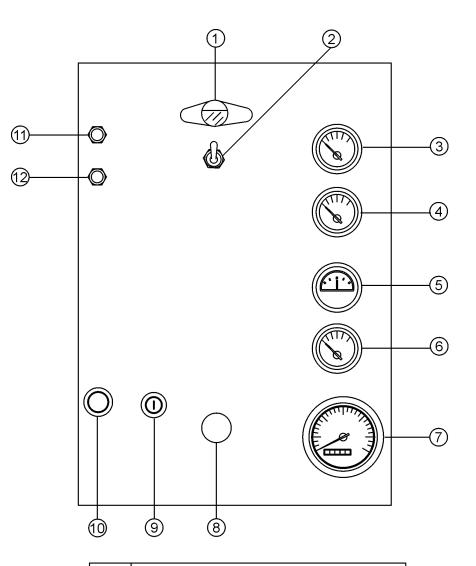

Figure 8. Control Panel

DCA-100SSJU — CONTROL PANEL

The definitions below describe the controls and functions of the DCA-100SSJU " *Control Panel* " (Figure 8).

- 1. Main Circuit Breaker This three-pole, 250 amp main breaker is provided to protect the UNV voltage output terminals from overload.
- 2. AC Ammeter Indicates the amount of current the load is drawing from the generator.
- Ammeter Change-Over Switch This switch allows the AC ammeter to indicate the current flowing to the load connected to any phase of the output terminals, or to be switched off.
- Voltmeter Change-Over Switch This switch allows the AC voltmeter to indicate phase to phase voltage between any two phases of the output terminals or to be switched off.
- 5. Voltage Regulator Control Allows manual adjustment of the generator's output voltage.
- 6. Frequency Meter Indicates the output frequency in hertz (Hz). Normally 60 Hz ±1 Hz.
- **7. AC Voltmeter** Indicates the single phase output voltage present at the UNV terminals.

PAGE 30 - DCA-100SSJU - PARTS AND OPERATION MANUAL (STD) - REV. #2 (05/03/01)

DCA-100SSJU — ENGINE OPERATING PANEL (WITH KEY)

The definitions below describe the controls and functions of the DCA-100SSJU " *Engine Operating Panel* " (Figure 9).

- Panel light Normally used in dark places or at night. When activated, panel will luminate. When the generator is not in use, turn the panel light switch to the 'OFF' position.
- 2. Panel light switch- When activated, will turn on control panel light.
- 3. Oil Pressure Gauge Normal operation should be about 25 psi. When starting the generator the oil pressure may read a bit higher, but after the engine warms up the oil pressure should return to normal.
- 4. Water Temperature Gauge During normal operation this gauge be should read between 165°F to 215°F.
- Charging Ammeter Gauge Indicates the current being supplied by the engine's alternator which provides current for generator's control circuits and battery charging system.
- 6. Fuel Gauge Indicates amount of diesel fuel available.
- 7. Tachometer Indicates engine speed in RPM's for 60 Hz operation. This meter should indicate 1800 RPM's when the rated load is applied. In addition a built in hour meter will record the number of operational hours that the generator has been in use.
- **8.** Engine Throttle Lever- This lever will change the speed of the engine from high to low.
- **9. Pre-Heat Button** Press hold this button to start the engine in cold conditions.
- Starter Switch with Key This switch has three different positions: Stop-Turn the key to stop the engine. Start-Turn the key to this position to start the engine. Release the key once the engine has started and it will automatically return to the operating position.
- 11. Oil Pressure Indicator This indicator lets the operator know the oil pressure is dangerously high or low and will shut down the engine.
- **12.** Water Temperature Indicator This indicator lets the operator know the water temperature is dangerously high and will shut down the engine.

DCA-100SSJU — ENGINE OPERATING PANEL (WITH MPEC)

PAGE 32 - DCA-100SSJU - PARTS AND OPERATION MANUAL (STD) - REV. #2 (05/03/01)

DCA-100SSJU — ENGINE OPERATING PANEL (WITH MPEC)

The definitions below describe the controls and functions of the DCA-100SSJU " *Engine Operating Panel* " (Figure 10).

- 1. Panel light Normally used in dark places or at night. When activated, panel will luminate. When the generator is not in use, turn the panel light switch to the 'OFF' position.
- 2. Panel light switch- When activated, will turn on control panel light.
- 3. Oil Pressure Gauge Normal operation should be about 25 psi. When starting the generator the oil pressure may read a bit higher, but after the engine warms up the oil pressure should return to normal.
- 4. Water Temperature Gauge During normal operation this gauge be should read between 165°F to 215°F.
- 5. Charging Ammeter Gauge Indicates the current being supplied by the engine's alternator which provides current for generator's control circuits and battery charging system.
- 6. Fuel Gauge Indicates amount of diesel fuel available.
- 7. Tachometer Indicates engine speed in RPM's for 60 Hz operation. This meter should indicate 1800 RPM's when the rated load is applied. In addition a built in hour meter will record the number of operational hours that the generator has been in use.
- **8.** Engine speed Handle- This handle will change the speed of the engine from high to low.
- Pre-Heat Button Press hold this button (Figure 11) until the preheat lamp is lit (ON).

Figure 11. Preheat Button

 MPEC – Microprocessor Engine Control Module – (MPEC) has a vertical row of status LED's (Figure 11), that when lit, indicate that an engine malfunction (fault), has been detected. When a fault has

Figure 12. MPEC

been detected the MPEC will evaluate the fault and all major faults will shutdown the generator. During *cranking cycle*, The MPEC will attempt to crank the engine for 10 seconds before disengaging. If the engine does not engage (start) by the third attempt, the engine will be shutdown by the MPEC's " Over Crank Protection" mode. If the engine engages at a speed (RPM's) that is not safe, the MPEC will shutdown the engine by initializing the "Over Speed Protection" mode.

Also the MPEC will shutdown the generator in the event of low oil pressure, high coolant temperature, low coolant level, and loss of magnetic pickup. These conditions can be observed by monitoring the LED status indicators on the front of the MPEC module.

A. Off/Manual/Auto Switch – This switch controls the running of the generator. If this switch is left in the "OFF" position, the generator will not run. When this switch is set to the *manual* position, the generator will start immediately.

If the generator is to be connected to a building's AC power source via a transfer switch (isolation), place the switch in the *auto* position. In this position the generator will monitor the AC line output from the building's power source.

- B. Low Oil Pressure Indicates the engine pressure has fallen below 15 psi. The oil pressure is detected using variable resistive values from the oil pressure sending unit. This is considered a *major* fault.
- C. High Coolant Temperature Indicates the engine temperature has exceeded 215°F. The engine temperature is detected using variable resistive values from the temperature sending unit. This is considered a *major* fault.
- D. Overcrank Shutdown Indicates the unit has attempted to start a pre- programmed number of times, and has failed to start. The number of cycles and duration are programmable. It is preset at 3 cycles with a 10 second duration. This is considered a *major* fault.
- E. Overspeed Shutdown Indicates the engine is running at an unsafe speed. This is considered a *major* fault.
- **F. Engine Running** Indicates that engine is running at a safe operating speed.

DCA-100SSJU - OUTPUTTERMINAL PANEL OVERVIEW

OUTPUTTERMINAL FAMILIARIZATION

The "Output Terminal Panel" is provided with the following:

- Three 120/240V output receptacles, 50 amp
- Two 120V input receptacles, 20 amp
- 3 Load Circuit Breakers 250V @50 amps
- 2 Load GFCI Circuit Breakers 120V@ 20amps

Control Box

The "Control Box" is provided with the following:

- Main Circuit Breaker 250 amps
- Over-Current Relay

Output Terminal Panel

The Output Control Panel (See Figure 16) is located on the right hand side (left from control panel) of the generator. The UNV lugs are protected by a face plate cover that can be secured in the close position by a pad lock. (See Figure 13).

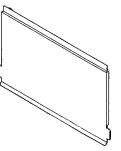

FIGURE 13. Output Terminal Cover

120 Volt Receptacle

Two GFCI Duplex Nema 5-20R (120V, 20 Amp) receptacle is provided on the output terminal. This receptacle can be used anytime the generator is in operation. The receptacle is controlled by the circuit breaker located on the control panel.

Pressing the reset button resets the receptacle after being tripped. Pressing the "Test Button" (See Figure 14) in the center of this receptacle will check the GFCI function. The receptacle should be tested at least once a month.

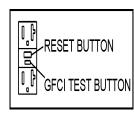

FIGURE 14. GFCI Test Button

Connecting Load

Loads can be connected to the generator by the UNV Lugs or the convenience receptacles. (See figure 15). Make sure to read the operation manual before attempting to connect a load to the generator.

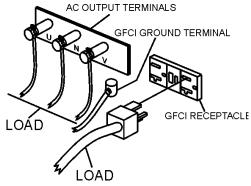

FIGURE 15. Connecting Load

Circuit Breakers

To protect the generator from an overload, a 3-pole, 250 amp, *main* circuit breaker is provided to protect the UNV output terminals from overload. In addition two single-pole, 20 amp *GFCI* circuit breakers are provided to protect the GFCI receptacles from overload. Three 50 amp *load* circuit breakers have also been provided to protect the load side of the generator from overload. Make sure to switch *ALL* circuit breakers to the "OFF" position prior to starting the engine.

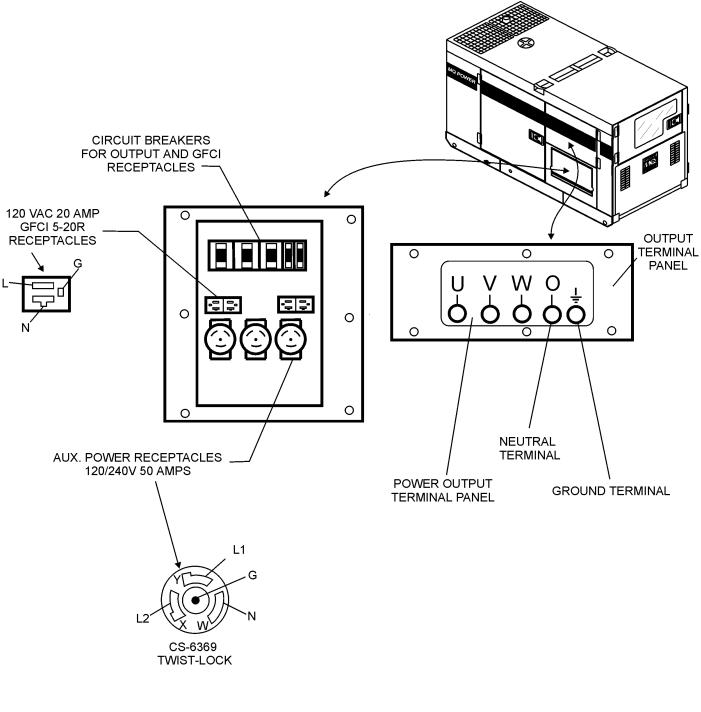

Maximum Output

The entire load connected to the UNV Lugs, all four slots in the duplex receptacles, and the must not exceed 88 kW in standby or 80 kW in prime output.

Twist Lock Dual Voltage Receptacles - To use these receptacles, place the voltage selector switch in the single phase 240/120 voltage position and adjust the output voltage to 240 volts with the voltage regulator on the Control Panel. Place the voltmeter change-over switch to the U-W position and the ammeter change-over switch to the U or W to read the output.

PAGE 34 — DCA-100SSJU — PARTS AND OPERATION MANUAL (STD) — REV. #2 (05/03/01)

DCA-100SSJU — OUTPUTTERMINAL PANEL OVERVIEW

NOTE

Legs O and Ground are considered Bonded Grounds.

DCA-100SSJU - OUTPUTTERMINAL PANEL OVERVIEW

Output Terminal Panel Available Voltages

A wide range of voltages are available to supply load to many different applications. Voltages may be selected by using the voltage selector switch and how you hookup your hard wire connection to the generator. To obtain some of the voltages listed, fine adjustment with the Voltage Regulator on the control panel is necessary. See the table below (Table 8) for a list of available voltages the generator is able to supply.

| Table 8. Available Voltages | | | | | | |
|---------------------------------|------------|----------|----------|----------|----------|----------|
| MODEL | DCA100SSJU | | | | | |
| 3 PHASE VOLTAGE (SWITCHABLE) | 208 VOLT | 220 VOLT | 240 VOLT | 416 VOLT | 440 VOLT | 480 VOLT |
| SINGLE PHASE (SWITCHABLE) | 120 VOLT | 127 VOLT | 139 VOLT | 240 VOLT | 254 VOLT | 277 VOLT |

Voltage Selector Switch

The voltage selector switch is located above the UVWO Hard Wire Hookup Panel. It has been provided for ease of voltage selection.

CAUTION:

NEVER switch Voltage Selector Switch position while the engine is engaged.

Voltage Selector Switch Locking Button

The voltage selector switch has a locking button to protect the generator and generator load from being switched while the engine is running. To lock the Voltage Selector Switch, press in the red button located on the Voltage Selector Switch, and use a pad lock to hold it into this position. (See figure 17, page 37)

Over Current Relay

An over current relay is connected to the circuit breaker. In an over current situation, both the circuit breaker and the over current relay may trip. If the circuit breaker can not be reset, the reset button on the over current relay must be pressed. The over current relay is located in the control box.

Maximum Amps

The following table show the maximum amps the entire generator can provide. Do not exceed the maximum amps listed. (See Table 9 below.)

| Table 9. Maximum Amps | | | |
|--------------------------|---------------------|--|--|
| Model: | DCA100SSJU | | |
| Rated Voltage | Maximum Amps | | |
| Single Phase 120 Volt | 222.2 amps (4 wire) | | |
| Single Phase 240 Volt | 111.1 amps (4 wire) | | |
| Three Phase 240 Volt | 241 amps | | |
| Three Phase 480 Volt | 120 amps | | |

Receptacle Use

When the UVWO terminals are providing power, the receptacle power available decrease. Do not exceed receptacle power available listed on Table 10.

| Table 10. Receptacle Use | | | | |
|--------------------------|---|------------------------------|--|--|
| Powe | Receptacle Power Available | | | |
| 240/480V 3-Phase | 240/120V Single Phase or Twist Lock CS6369 | Duplex NEMA 5-20R 120V | | |
| KVA | ĸw | ĸw | | |
| 100 | 57.7 | 0 | | |
| 95.8 | 56.5 | 1.2 | | |
| 91.7 | 55.3 | 2.4 | | |
| 87.5 | 54.1 | 3.6 | | |
| 83.4 | 52.9 | 4.8 | | |

PAGE 36 — DCA-100SSJU — PARTS AND OPERATION MANUAL (STD) — REV. #2 (05/03/01)

DCA-100SSJU - OUTPUTTERMINAL PANEL OVERVIEW

How to read the output terminal gauges.

The gauges and knobs on the control panel **DO NOT** effect the generator output in any fashion. They are there to simply help the operator observe how much power is being supplied produced at the UVWO legs.

When the Voltage selector switch is in the 240/120V position (see figure 17), place the AC Voltmeter Changeover switch to the W-U position and the AC ammeter Change -over Switch to the U or W position to read the output on the selected leg.

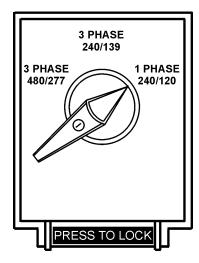

FIGURE 17. Voltage Selector Switch 240/120V Single Phase Position

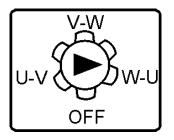

FIGURE 18. AC Voltmeter Change-over switch (Reading the W-U leg on the output terminal panel)

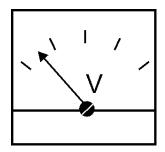

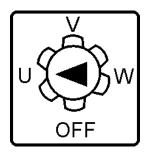

FIGURE 19. AC Voltmeter Guage (Volt reading on W-U Lug)

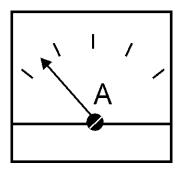

FIGURE 20. AC Ammeter Change-over Switch (Reading the U leg on the output terminal panel)

FIGURE 21. AC Ammeter (Amp reading on U lug)

NOTE

When using plural single phase voltages, make sure to balance the load on each of the single phase legs.

DCA-100SSJU - OUTPUTTERMINAL PANEL OVERVIEW

240/120V Hard Wire Hookup

The output terminal panel, when suppling single phase 120 volts, will provide three legs available with 222.2 amps each on three different circuits. (See Figure 23 below.) The voltage selector switch must be set at the single phase 240/120V position. (See figure 22 below.)

The output terminal panel, when suppling single phase 240 volts, will provide one leg only with 111.1 amps available. (See Figure 23 below.) The voltage selector switch must be set at the single phase 240/120V position. (See figure 22 below.)

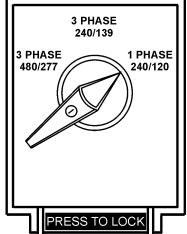

FIGURE 22. Voltage Selector Switch 240/120V Single Phase Position

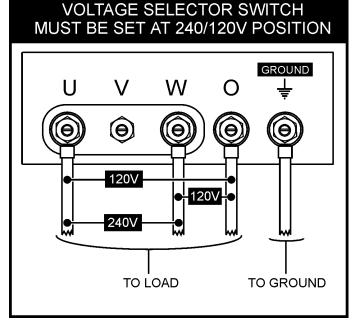

FIGURE 23. Hard Wire Hookup at 240/120V Position

480/240V Hard Wire Hookup

The output terminal panel, when suppling three phase 240 volts, will provide one circuit available at 241 amps with any two wires plus the ground. (See Figure 25 below.) The voltage selector switch must be set at the three phase 480/277V position. (See figure 24 below.)

The output terminal panel, when suppling 3 phase 480 volts, will provide one circuit available at 120 amps available with all three wires plus ground. (See Figure 25 below.) The voltage selector switch must be set at the three phase 480/277V position. (See figure 24 below.)

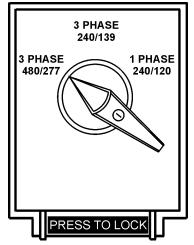

FIGURE 24. Voltage Selector Switch 480/277V Three Phase Position

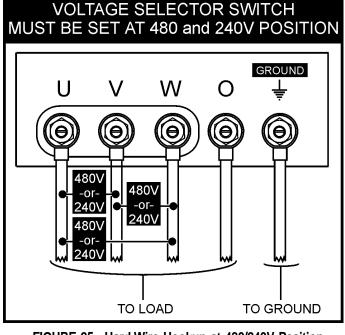

FIGURE 25. Hard Wire Hookup at 480/240V Position

DCA-100SSJU — OUTPUTTERMINAL PANEL OVERVIEW

Voltage Selector Switch- 3 Phase 480/277V Position

The following are additional voltages available when the voltage selector switch is in the 3 phase 480/277V position. (See figure 26 below.)

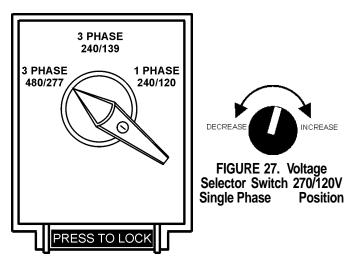

FIGURE 26. Voltage Selector Switch 480/277V Single Phase Position

Single Phase: 480V, 440V, or 416 Volt

The following connection, with the voltage selector switch locked into the 3 phase 480/277V position (See Figure 26), can offer **SINGLE PHASE** power at 480V, 440V, or 416V. After hooking up the hard wires to the lugs as shown in figure 29 below, 480V will be the voltage with the Voltage Regulator Knob turned toward maximum. 440 volt will be reached when the Voltage Regulator Knob is turned down, and 416 volt when the Voltage Regulator Knob is toward the lowest setting (See Figure 27).

OUTPUT TERMINALS 1-PHASE, 480V, 440V, 416V

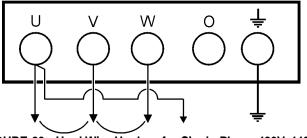

FIGURE 29. Hard Wire Hookup for Single Phase 480V, 440V, or 416V

3 Phase, 480V, 440V, or 416 Volt

The following connection, with the voltage selector switch locked into the 3 phase 480/277V position (See Figure 26), can offer **THREE PHASE** power at 480V, 440V, or 416V. After hooking up the hard wires to the lugs as shown in figure 28 below, 480V will be the voltage with the Voltage Regulator Knob turned toward maximum. 440 volt will be reached when the Voltage Regulator Knob is turned down, and 416 volt when the Voltage Regulator Knob is toward the lowest setting (See Figure 27).

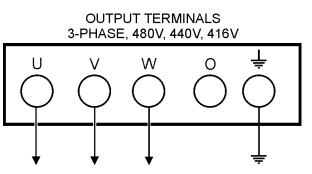

FIGURE 28. Hard Wire Hook-up for Three Phase 480V, 440V, or 416V

Single Phase: 277V, 254V, or 240V

The following connection, with the voltage selector switch locked into the 3 phase 480/277V position (See Figure 26), can offer **SINGLE PHASE** power at 277V, 254V, or 240V. After hooking up the hard wires to the lugs as shown in figure 30 below, 277V will be the voltage with the Voltage Regulator Knob turned toward maximum. 254 volt will be reached when the Voltage Regulator Knob is turned down, and 240 volt when the Voltage Regulator Knob is toward the lowest setting (See Figure 27).

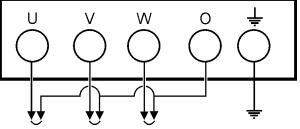

FIGURE 30. Hard Wire Hookup for Single Phase 277V, 254V, or 240V

DCA-100SSJU - OUTPUTTERMINAL PANEL OVERVIEW

Voltage Selector Switch- 3 Phase 240/139V Position

The following are additional voltages available when the voltage selector switch is in the 3 phase 240/139V position. (See Figure 31 below.)

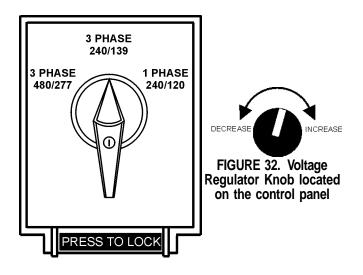

FIGURE 31. Voltage Selector Switch 240/139V Three Phase Position

3 Phase, 240V, 220V, or 208 Volt

The following connection, with the voltage selector switch locked into the 3 phase 240/139V position (See Figure 31), can offer **THREE PHASE** power at 270V, 220V, or 208V. After hooking up the hard wires to the lugs as shown in figure 33 below, 240V will be the voltage with the Voltage Regulator Knob turned toward maximum. 220 volt will be reached when the Voltage Regulator Knob is turned down, and 208 volt when the Voltage Regulator Knob is toward the lowest setting (See Figure 32).

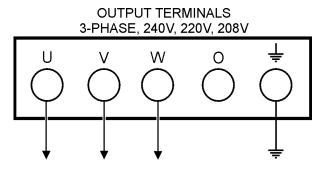

FIGURE 33. Hard Wire Hookup for Three Phase 240V, 220V, or 208V

Single Phase: 240V, 220V, or 208 Volt

The following connection, with the voltage selector switch locked into the 3 phase 240/139V position (See Figure 31), can offer **SINGLE PHASE** power at 240V, 220V, or 208V. After hooking up the hard wires to the lugs as shown in figure 34 below, 240V will be the voltage with the Voltage Regulator Knob turned toward maximum. 220 volt will be reached when the Voltage Regulator Knob is turned down, and 208 volt when the Voltage Regulator Knob is toward the lowest setting (See Figure 32).

OUTPUT TERMINALS 1-PHASE, 240V, 220V, 208V

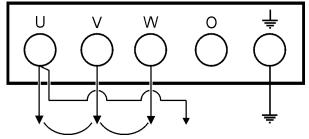

FIGURE 34. Hard Wire Hookup for Single Phase 240V, 220V, or 208V

Single Phase: 139V, 127V, or 120V

The following connection, with the voltage selector switch locked into the 3 phase 240/139V position (See Figure 31), can offer **SINGLE PHASE** power at 139V, 127V, or 120V. After hooking up the hard wires to the lugs as shown in figure 35 below, 139V will be the voltage with the Voltage Regulator Knob turned toward maximum. 127 volt will be reached when the Voltage Regulator Knob is turned down, and 120 volt when the Voltage Regulator Knob is toward the lowest setting (See Figure 32).

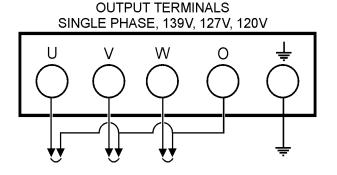

FIGURE 35. Hard Wire Hookup for Single Phase 139V, 127V, or 120V

PAGE 40 — DCA-100SSJU — PARTS AND OPERATION MANUAL (STD) — REV. #2 (05/03/01)

DCA-100SSJU — OUTPUTTERMINAL PANEL OVERVIEW

Voltage Selector Switch- Single Phase 240/120V Position

The following are additional voltages available when the voltage selector switch is in the single phase 240/120V position. (See Figure 36 below)

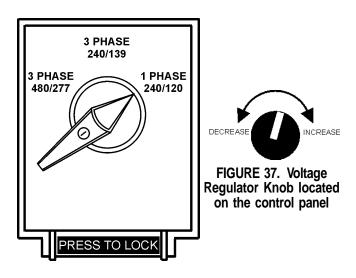

FIGURE 36. Voltage Selector Switch 240/120V Single Phase Position

Single Phase, 240 Volt

The following connection, with the voltage selector switch locked into the single phase 240/120V position (See Figure 36), will offer **SINGLE PHASE** power at 240V. After hooking up the hard wires to the lugs as shown in figure 38 below, use the Voltage Regulator Knob to fine tune to 240V. (See Figure 37)

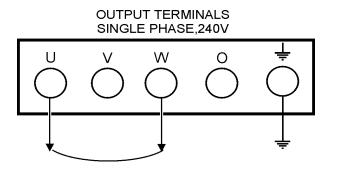

FIGURE 38. Hard Wire Hookup for Single Phase 240 volt

Single Phase: 120 Volt

The following connection, with the voltage selector switch locked into the single phase 240/120V position (See Figure 36), will offer **SINGLE PHASE** power at 120V. After hooking up the hard wires to the lugs as shown in figure 39 below, use the Voltage Regulator Knob to fine tune to 120V. (See Figure 37).

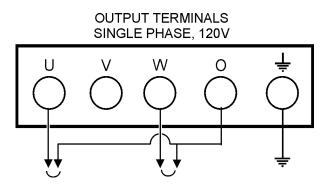

FIGURE 39. Hard Wire Hookup for Single Phase, 120 volt

Outdoor Installation

Install the generator in a location where it will not be exposed to rain or sunshine. Make sure the generator is on secure level ground so it cannot slide or shift around. Also install the generator so the exhaust will not be discharged in the direction of nearby homes.

The installation site must be relatively free from moisture and dust. All electrical equipment should be protected from excessive moisture. Failure to do will result in deterioration of the insulation and will result in short circuits and grounding.

Foreign materials such as dust, sand, lint and abrasive materials have a tendency to cause excessive wear to the engine and alternator parts.

CAUTION:

Pay close attention to ventilation when operating the generator inside tunnels and caves. The engine exhaust contains noxious elements. Engine exhaust must be routed to a ventilated area.

Indoor Installation

Exhaust gases from diesel engines are extremely poisonous. Whenever an engine is installed indoors the exhaust fumes must be vented to the outside. The engine should be installed at least two feet from any outside wall. Using an exhaust pipe which is too long or too small can cause excessive back pressure which will cause the engine to heat excessively and possibly burn the valves.

CAUTION:

An electric shock may happen when vibrators are used. Pay close attention to handling when operating vibrators and always use rubber boots and gloves to insulate the body from electrical shock.

Generator Grounding

To guard against electrical shock and possible damage to the equipment, it is important to provide a good **EARTH** ground.

Article 250 (Grounding) of the National Electrical Code (NEC) provides guide lines for proper grounding and specifies that the cable ground shall be connected to the grounding system of the building as close to the point of cable entry as practical.

NEC articles 250-64(b) and 250-66 set the following grounding requirements:

- 1. Use one of the following wire types to connect the generator to earth ground.
 - a. Copper 10 AWG (5.3 mm²) or larger.
 - b. Aluminum 8 AWG (8.4 mm²) or larger.
- 2. When grounding the generator (Figure 14) connect the ground cable between the lock washer and the nut on the generator and tighten the nut fully. Connect the other end of the ground cable to earth ground.
- 3. NEC article 250-52(c) specifies that the earth ground rod should be buried a minimum of 8 ft. into the ground.

NOTE

When connecting the generator to any buildings electrical system **ALWAYS** consult with a licensed electrician.

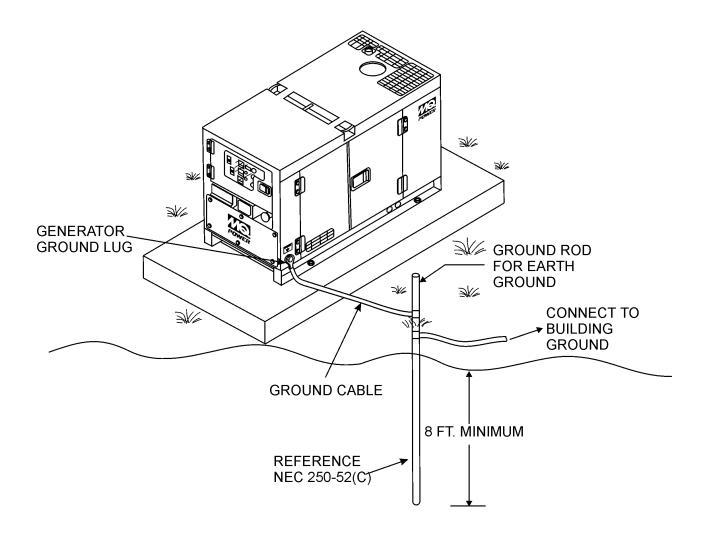

Figure 40. Typical Generator Grounding Application

General Inspection Prior to Operation

The DCA-100SSJU generator has been thoroughly inspected and accepted prior to shipment from the factory. However, be sure to check for damaged parts or components, or loose nuts and bolts, which could have occurred in transit.

Extension Cable

When electric power is to be provided to various tools or loads at some distance from the generator, extension cords are normally used. Cables should be sized to allow for distance in length and amperage so that the voltage drop between the generator and point of use (load) is held to a minimum. Use the Cable Selection Guide (Table 11) as a guide for selecting proper cable size.

Circuit Breakers

To protect the generator from an overload, a 3-pole, 250 amp, *main* circuit breaker is provided to protect the UNV output terminals from overload. In addition two single-pole, 20 amp *GFCI* circuit breakers are provided to protect the GFCI receptacles from overload. Three 50 amp *load* circuit breakers have also been provided to protect the load side of the generator from overload. Make sure to switch *ALL* circuit breakers to the "OFF" position prior to starting the engine.

NOTE

ALWAYS consult with a licensed electrician for correct extension cord wire size.

| | Table 11. Cable Selection (60 Hz, Single Phase Operation) | | | | | | |
|------------|---|-----------------|-------------------|--------------------------------|----------|----------|--|
| Current in | Load In V | Natts | N | Maximum Allowable Cable Length | | | |
| Amperes | At 120 Volts | At 240 Volts | #10 Wire | #12 Wire | #14 Wire | #16 Wire | |
| 2.5 | 300 | 600 | 1000 ft. | 600 ft. | 375 ft. | 250 ft. | |
| 5 | 600 | 1200 | 500 ft. | 300 ft. | 200 ft. | 125 ft. | |

| CAUTION: E | quipment d | amage car | n result from low | voltage. | | | |

Lubrication Oil

Fill the engine crankcase with lubricating oil through the filler hole, but do not overfill. Make sure the generator is level. With the dipstick inserted all the way, but without being screw into the filler hole, verify that the oil level is maintained between the two notches (Figure 41) on the dipstick. See Table 10 for proper selection of engine oil.

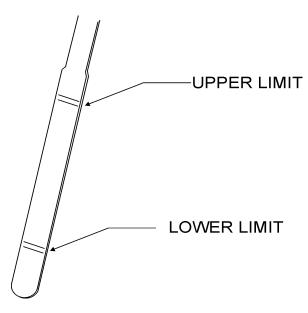

Figure 41. Engine Oil Dipstick

When checking the engine oil, be sure to check if the oil is clean and viscous. If the oil is not clean, drain the oil by removing the oil drain plug, and refill with the specified amount of oil as outlined in the John Deere Engine Owner's Manual.

Fuel

Fill the fuel tank with clean and fresh *diesel fuel*. DO NOT fill the tank beyond capacity.

Pay attention to the fuel tank capacity when replenishing fuel. Refer to the fuel tank capacity listed on page 23, Specification Table 7.

The fuel tank cap must be closed tightly after filling. Handle fuel in a safety container. If the container does not have a spout, use a funnel. Wipe up any spilled fuel immediately.

CAUTION:

Never fill the fuel tank while the engine is running or in the dark. Diesel spillage on a hot engine can cause a fire or explosion. If diesel spillage occurs, wipe up the spilled diesel completely to prevent fire hazards.

Coolant

Use only drinkable tap water. If hard water or water with many impurities is used, the inside of the engine and radiator may become coated with deposits and cooling efficiency will be reduced.

An anticorrosion additive added to the water will help prevent deposits and corrosion in the cooling system. See the engine manual for further details.

| Table 12. Recommended Motor Oil | | | |
|----------------------------------|---------------------|--|--|
| Temperature Range | Type Oil | | |
| 104° F ~ 23° F (40° C ~ -5°C) | SAE 15W-40 | | |
| 23° F ~ 5° F (-5° C ~ -15°C) | SAE 5W-30 | | |
| Below 5° C (-15°) | SAE 30 OR SAE 0W-30 | | |

DCA-100SSJU - PARTS AND OPERATION MANUAL (STD)- REV. #2 (05/03/01) - PAGE 45

DCA-100SSJU - PRE-SETUP

CAUTION:

When adding coolant or antifreeze to the radiator, do not remove the radiator cap until the unit has completely cooled.

Day-to-day addition of coolant is done from the reserve tank. When adding coolant to the radiator, **DO NOT** remove the radiator cap until the unit has completely cooled. See Table 13 for engine, radiator, and reserve tank coolant capacities. Make sure the coolant level in the reserve tank is always between the "H" and the "L" markings.

| Table 13. Coolant Capacity | | |
|----------------------------|-----------------------|--|
| Engine and Radiator | 10.3 Gal. (39 Liters) | |
| Reserve Tank | 2 Quarts (1.9 Liters) | |

Operation in Freezing Weather

When operating in freezing weather, be certain the proper amount of antifreeze (Table 14) has been added.

| Table 14. Anti-Freeze Operating Temperatures | | | | | |
|--|----------------|-----|---------------|-----|--|
| Vol % | Freezing Point | | Boiling Point | | |
| Vol % Anti-Freeze | °C | ۴ | °C | °F | |
| 40 | -24 | -12 | 106 | 222 | |
| 50 | -37 | -34 | 108 | 226 | |

NOTE

When the antifreeze is mixed with water, the antifreeze mixing ratio must be less than 50%.

Cleaning the Radiator

The engine may overheat if the radiator fins become overloaded with dust or debris. Periodically clean the radiator fins with compressed air. Cleaning inside the machine is dangerous, so clean only with the engine turned off and the battery disconnected.

Air Cleaner

Periodic cleaning/replacement is necessary. Inspect it in accordance with the **John Deere Engine Owner's Manual**.

Fan Belt Tension

A slack fan belt may contribute to overheating, or to insufficient charging of the battery. Inspect the fan belt for damage and wear and adjust it in accordance with the **John Deere Engine Owner's Manual.**

The fan belt tension is proper if the fan belt bends 7 to 10 mm (Figure 42) when depressed with the thumb as shown below.

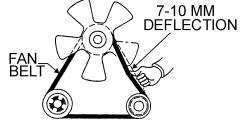

Figure 42. Fan Belt Tension

CAUTION:

Never place hands near the belts or fan while the generator set is running.

Battery

This unit is of negative ground. **DO NOT** connect in reverse. Always maintain battery fluid level between the specified marks. Battery life will be shortened, if the fluid level is not properly maintained. Add only distilled water when replenishment is necessary.

The battery is sufficiently charged if the specific gravity of the battery fluid is 1.28 (at 68°F). If the specific gravity should fall to 1.245 or lower, it indicates the battery is discharged and needs to be recharged or replaced.

Check to see whether the battery cables are loose. Poor contact may result in poor starting or malfunctions. Always keep the terminals firmly tightened. Coating the terminals with a thin film of grease will help inhibit corrosion.

DCA-100SSJU - PRE-SETUP

Battery Cable Installation

ALWAYS be sure the battery cables (Figure 43) are properly connected to the battery terminals as shown below. The *RED* cable is connected to the positive terminal of the battery, and the **BLACK** cable is connected to the negative terminal of the battery.

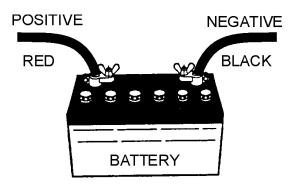

Figure 43. Battery Connections

CAUTION:

If the battery cable is connected incorrectly, electrical damage to the generator will occur. Pay close attention to the polarity of the battery when connecting the battery.

When connecting battery do the following:

- DO NOT connect the battery cables to the battery terminals when the *Off/Manual/Auto* switch is in either the manual or auto position (ON). ALWAYS make sure that the Off/Manual/Auto switch is in the OFF position when connecting the battery.
- 2. Place a small amount of grease around both battery terminals. This will ensure a good connection and will help prevent corrosion around the battery terminals.

CAUTION:

Inadequate battery connections may cause poor starting of the generator, and create other malfunctions.

Wiring

Inspect the entire generator for bad or worn electrical wiring or connections. If any wiring or connections are exposed (insulation missing) replace wiring immediately.

Piping and Hose Connection

Inspect all piping, oil hose, and fuel hose connections for wear and tightness. Tighten all hose clamps and check hoses for leaks.

If any hose (fuel or oil) lines are defective replace them immediately.

DCA-100SSJU - LOAD APPLICATION

Single Phase Load

Always be sure to check the nameplate on the generator and equipment to insure the wattage, amperage and frequency requirements are satisfactorily supplied by the generator for operating the equipment.

Generally, the wattage listed on the nameplate of the equipment is its rated output. Equipment may require 130—150% more wattage than the rating on the nameplate, as the wattage is influenced by the efficiency, power factor and starting system of the equipment.

When the voltage selector switch is in single phase (240/ 120V position), place the AC voltmeter change-over switch to the U-W position and the AC ammeter change over-switch to the U or W position to read the output.

NOTE

If wattage is not given on the equipment's name plate, approximate wattage may be determined by multiplying nameplate voltage by the nameplate amperage.

WATTS = VOLTAGE x AMPERAGE

The power factor of this generator is 1.0. See Table 15. below when connecting loads.

| Table 15. Power Factor By Load | | |
|---|--------------|--|
| Type of Load | Power Factor | |
| Single-phase induction motors | 0.4 - 0.75 | |
| Electric heaters, Incandescent lamps | 1.0 | |
| Flourescent lamps, Mercury lamps | 0.4 - 0.9 | |
| Electric devices, Communication equipment | 1.0 | |

Three Phase Load

When calculating the power requirements for 3-phase power use the following equation:

VOLTAGE X AMPERAGE X 3 KVA =1000

CAUTION:

Motors and motor-driven equipment draw much greater current for starting than during operation.

An inadequate size connecting cable which cannot carry the required load can cause a voltage drop which can burn out the appliance or tool and overheat the cable.

- When connecting a resistance load such as an incandescent lamp or electric heater, a capacity of up to the generating set's rated output (kW) can be used.
- When connecting a fluorescent or mercury lamp, a capacity of up to the generating set's rated output (kW) multiplied by 0.6 can be used.
- When connecting an electric drill or other power tools, pay close attention to the required starting current capacity.

If wattage is not available on the equipment, approximate wattage may be determined by multiplying the nameplate voltage by the nameplate amperage for three-phase: WATTS = $1.732 \times VOLTAGE \times AMPERAGE$

CAUTION:

Before connecting this generator to any building's electrical system, a licensed electrician must install an isolation (transfer) switch. Serious injury or death may result without this transfer switch.

NOTE

If output (kVA) is not given on the equipment nameplate, approximate output may be determined by multiplying voltage by amperage by $\sqrt{3}$

DCA-100SSJU — GENERATOR START-UP PROCEDURE

WARNING:

The engine's exhaust contains harmful emissions. *ALWAYS* ventilate the exhaust when operating inside tunnels, excavations or buildings. Direct exhaust away from nearby personnel.

Before Starting

Engine

- 1. Check the lubricating oil level prior to starting the engine. Make sure the generator is level. The oil level must be maintained between two notches on the dipstick.
- 2. When there is not enough lubricating oil, fill the crankcase with high grade motor oil. Use a high quality detergent oil classified CC or higher (See Table 3 on page 27).
- Check the coolant level in the radiator and subtank. Replenish with antifreeze as necessary. Always maintain the coolant level between the FULL and LOW markings on the coolant container. Be sure that the radiator cap is fastened securely.
- Check the fuel level on the fuel gauge. If fuel is low, fill the fuel tank with clean fresh unleaded automotive diesel. If diesel spillage occurs, completely wipe up the spilled fuel immediately.

Before Starting

Generator and Control Panel CAUTION:

NEVER start the engine with the *main, GFCI* or *load* circuit breakers in the **ON** position.

1.

Be sure to disconnect the electrical load and switch the *main, load* and *G.F.C.I.* circuit breakers (Figure 44) to the "OFF" position prior to starting the engine.

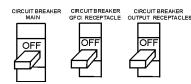

Figure 44. Main, GFCI and Load Circuit Breakers

 Connect the load to the UNV terminals as shown in Figure 45. These terminals can be found on the output terminal panel, (see page 35 Figure 16). To gain access to the output terminals lift the UNV cover. Tighten terminal nuts securely to prevent load wires from slipping out.

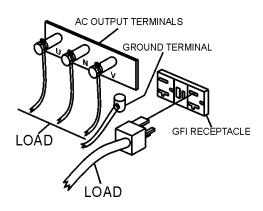

Figure 45. UNV Terminal Lugs (Load)

3. Connect the negative battery cable (BLACK) to the negative post on the battery (Figure 46).

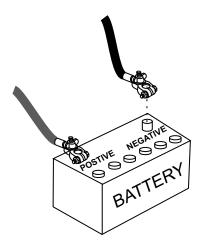

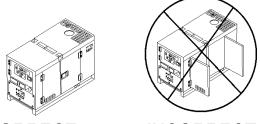

Figure 46. Battery Connections

DCA-100SSJU — GENERATOR START-UP PROCEDURE (MANUAL)

4. Close all engine enclosure doors (Figure 47).

CORRECT

INCORRECT

Figure 47. Engine Enclosure Doors

5. When starting the generator in **COLD** weather conditions, press and hold the engine preheat button (Figure 48).

Figure 48. Engine Pre-Heat Button

6. Check the voltage selection switch is at the desired voltage (Figure 49).

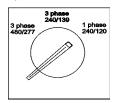

Figure 49. Voltage Selection Switch

 If the generator is equipped with a engine throttle lever, make sure the lever is pushed in and set to 'IDLE' (Figure 50).

Figure 50. Engine Throttle Lever (IDLE)

O PULL TO RUN

8. If the generator has a starter switch, turn the key to 'START' (Figure 51) until the engine starts. Then release the key to set it at 'OPERATION' function.

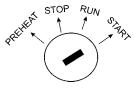

Figure 51. Engine Speed Switch (low)

9. Once the engine is warm and the engine is running properly, pull and turn the lever to 'RUN (Figure 52)'.

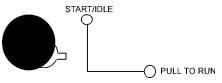

Figure 52. Engine Speed Switch (low)

 If the generator is equipped with a Microprocessor Engine Control unit (MPEC), set engine speed switch to 'Low' (Figure 53).

Figure 53. Engine Speed Switch (low)

 Turn the Auto-Off/Reset-Manual switch to 'Manual' to start the engine (Figure 54). Once the engine starts, let the engine run for 1-2 minutes. Listen for any abnormal noises.

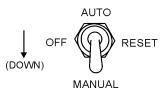

Figure 54. Auto-Off/Reset-Manual Switch

 Once the engine is warm and the engine is running properly, set the engine speed switch to 'High' (Figure 55).

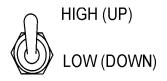

Figure 55. Engine Speed Switch (high)

PAGE 50 — DCA-100SSJU — PARTS AND OPERATION MANUAL (STD) — REV. #2 (05/03/01)

DCA-100SSJU — GENERATOR START-UP PROCEDURE (MANUAL)

13. The generator's frequency meter (Figure 56) displays the 60 cycle output frequency in **HERTZ**.

Figure 56. Frequency Meter (Hz)

14. The generator's voltage meter (Figure 57) displays the 120 VAC in **VOLTS**. If the voltage is not within the specified frequency tolerance, use the voltage adjustment control knob (Figure 58) to increase or decrease the desired voltage.

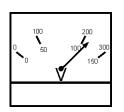

Figure 57. Engine Speed Switch (low)

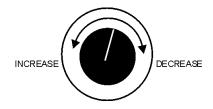

Figure 58. Voltage Adjust Control Knob

15. The ammeter (Figure 59) will indicate zero amps with no load applied. When a load is applied, this meter will indicate the amount of current that the load is drawing from the generator's alternator.

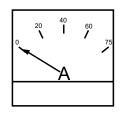

Figure 59. Ammeter (No Load)

 The engine oil pressure gauge (Figure 60) will indicate the oil pressure (kg/ cm²) of the engine. Under normal operating conditions the oil pressure is approximately 25 psi.

Figure 60. Oil Pressure Gauge

17. The coolant temperature gauge (Figure 61) will indicate the coolant temperature. Under normal operating conditions the coolant temperature is between 165 and 215 degrees Fahrenheit.

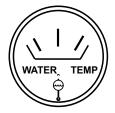

Figure 61. Coolant Temperature Gauge

 The tachometer (Figure 62) will indicate the speed of the engine when the generator is operating. Under normal operating conditions this speed is approximately 1800 RPM's.

Figure 62. Engine Tachometer

19. Turn the MAIN, GFCI and LOAD circuit breakers to their ON position (Figure 63).

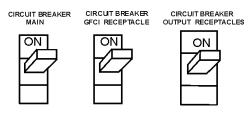

Figure 63. Main and GFCI Circuit Breakers

DCA-100SSJU — GENERATOR START-UP PROCEDURE (AUTO)

20. Observe the generator's ammeter (Figure 64) and verify it reads the anticipated amount of current with respect to the load. The ammeter will only display a current reading if the load is in use.

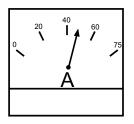

Figure 64. Ammeter (Load)

21. The generator will run until manually stopped or an abnormal condition occurs.

CAUTION:

Before connecting this generator to any building's electrical system, a **licensed electrician** must install an isolation (transfer) switch. Serious *injury* or *death* may result without this transfer switch.

CAUTION:

When connecting the generator to a isolation (transfer) switch, **ALWAYS** have power applied to the generator's internal battery charger. This will ensure that the engine will not fail due to a dead battery.

Starting the generator in the "**AUTO**" mode is similar to starting the generator in the "**MANUAL**" mode, with a few exceptions.

CAUTION:

When running the generator in the **AUTO** mode, remember the generator can start up at any time without warning. **NEVER** attempt to perform any maintenance when the generator is in the auto mode.

When starting generator in Auto mode use the "Manual Startup" procedure except where noted (see below).

- 1. Perform steps 1 through 10 (Before Starting, page 49-50) as outlined in the manual starting procedure.
- 2. Place the Off/Manual/Auto switch (Figure 65) in the **AUTO** position (up).

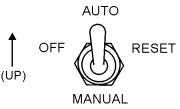

Figure 65. Off/Manual Auto Switch (AUTO)

3. Continue to follow the steps outline in the manual startup procedure (start at step 13, page 51).

DCA-100SSJU — GENERATOR SHUTDOWN PROCEDURE

ENGINE SHUTDOWN

To shutdown the generator, use the following procedure:

1. Switch both the MAIN, GFCI and LOAD circuit breakers (Figure 66) to the "OFF" position.

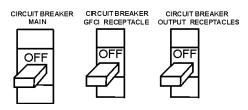

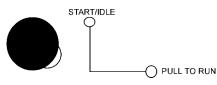

Figure 66. Main, GFCI and Load circuit breakers

2. Set the engine speed switch (Figure 67) to the idle (low) position.

Figure 67. Engine Speed Switch

3. If the engine is equipped with the engine throttle lever, turn and push to 'IDLE' position (Figure 68).

- 4. Let the engine cool by running it for 3-5 minutes with no load applied.
- 5. Turn the Auto-Off/Reset-Manual switch from the MPEC to "OFF/Reset" position (Figure 69).

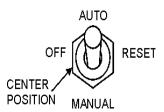

Figure 69. Off/Manual Auto Switch

6. If the engine is equipped with the engine throttle lever, turn the key to "STOP" position (Figure 70).

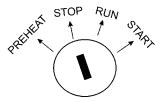

Figure 70. Engine Starter Switch (STOP)

7. Remove the load from the UNV terminal strip.

DCA-100SSJU — MAINTENANCE

General Inspection

Prior to each use, the generating set should be cleaned and inspected for deficiencies. Check for loose, missing or damaged nuts, bolts or other fasteners. Also check for fuel or oil leaks.

Engine Side, Fuel, Oil and Coolant (Refer to the Engine Instruction Manual)

Air Cleaner

Every 50 hours: Remove air cleaner element and clean heavy duty paper element with kerosene, or foam element with liquid detergent and hot water. Wrap foam element in a cloth and squeeze dry. For heavy duty paper element, wipe excess kerosene with towel

Fuel Addition

Add diesel fuel (the grade may vary according to season and locations). Always pour through the mesh filter.

Removing Water from the Tank

After prolonged use, water and other impurities accumulate in the bottom of the tank. Occasionally remove the drain cock and drain the contents. During cold weather, the greater the empty volume inside the tank, the easier it is for water to condense. This can be reduced by always keeping the tank as full as possible.

Air Removal

If air enters the fuel injection system of a diesel engine, starting becomes impossible. After running out of fuel, or after disassembling the fuel system, bleed the system according to the following procedure.

To restart after running out of fuel, turn the key switch to the "START" position for 15-30 seconds. Try again, if needed. This unit is equipped with an automatic air bleeding system.

Service Daily

If engine is operating in very dusty and dry grass conditions, a clogged air cleaner will result in high fuel consumption, loss of power and excessive carbon buildup in the combustion chamber.

Cleaning the Fuel Strainer

Clean the fuel strainer if it contains dust or water. Remove dust or water in the strainer cap and wash it in diesel. Securely fasten the fuel strainer cap so that fuel will not leak. Check the fuel strainer every 200 hours of operation or once a month.

Check Oil Level

Check the crankcase oil level prior to each use, or when the fuel tank is filled. Insufficient oil may cause severe damage to the engine. Make sure the generator is level. The oil level must be between the two notches on the dipstick as shown in page 27, Figure 9.

Generator Storage

For storage of the generator for over 30 days, the following is required:

- Drain the fuel tank completely.
- Completely drain the oil from the crankcase and refill with fresh oil.
- Clean all external parts of the generator with a cloth.
- Cover the generating set and store in a clean, dry place.

*1 Replace engine oil anf filter at 100 hours, first time only.

*2 Replace fuel filter at 250 Hours, first time only.

DCA-100SSJU — TROUBLESHOOTING (ENGINE)

Practically all breakdowns can be prevented by proper handling and maintenance inspections, but in the event of a breakdown, use the tables shown for diagnosis based on the Engine Troubleshooting (Table 17). If the problem cannot be remedied, consult our company's business office or service plant.

| TABLE 17. ENGINE TROUBLESHOOTING | | | | |
|----------------------------------|--|---|--|--|
| SYMPTOM | POSSIBLE PROBLEM | SOLUTION | | |
| | No fuel? | Replenish fuel. | | |
| | Air in the fuel system? | Bleed system. | | |
| | Water in the fuel system? | Remove water from fuel tank. | | |
| | Fuel pipe clogged? | Clean fuel pipe. | | |
| | Fuel filter clogged? | Clean or change fuel filter. | | |
| | Excessively high viscosity of fuel or engine oil at low temperature? | Use the specified fuel or engine oil. | | |
| | Fuel with low cetane number? | Use the specified fuel. | | |
| | Fuel leak due to loose injection pipe retaining nut? | Tighten nut. | | |
| Engine does not start. | Incorrect injection timing? | Adjust. | | |
| | Fuel cam shaft worn? | Replace. | | |
| | Injection nozzle clogged? | Clean injection nozzle. | | |
| | Injection pump malfunctioning? | Repair or replace. | | |
| | Seizure of crankshaft, camshaft, piston, cylinder liner or bearing? | Repair or replace. | | |
| | Compression leak from cylinder? | Replace head gasket, tighten cylinder head bolt, glow plug and nozzle holder. | | |
| | Improper valve timing? | Correct or replace timing gear. | | |
| | Piston ring and liner worn? | Replace. | | |
| | Excessive valve clearance? | Adjust. | | |
| | Battery discharged? | Charge battery. | | |
| Starter does not run. | Starter malfunctioning? | Repair or replace. | | |
| | Key switch malfunctioning? | Repair or replace. | | |
| | Wiring disconnected? | Connect wiring. | | |

DCA-100SSJU — TROUBLESHOOTING (ENGINE)

| TABLE 18. ENGINE TROUBLESHOOTING (CONTINUED) | | | |
|--|--|---|--|
| SYMPTOM | POSSIBLE PROBLEM | SOLUTION | |
| | Fuel filter clogged or dirty? | Clean or change. | |
| | Air cleaner clogged? | Clean or change. | |
| | Fuel leak due to loose injection pipe retaining nut? | Tighten nut. | |
| | Injection pump malfunctioning? | Repair or replace. | |
| Engine revolution is not smooth. | Incorrect nozzle opening pressure? | Adjust. | |
| | Injection nozzle stuck or clogged? | Repair or replace. | |
| | Fuel over flow pipe clogged? | Clean. | |
| | Governor malfunctioning? | Repair. | |
| | Excessive engine oil? | Reduce to the specified level. | |
| Either white or blue exhaust gas | Piston ring and liner worn or stuck? | Repair or replace. | |
| is observed. | Incorrect injection timing? | Adjust. | |
| | Deficient compression? | Adjust top clearance. | |
| | Overload? | Lessen the load. | |
| | Low grade fuel used? | Use the specified fuel. | |
| Either black or dark gray exhaust gas is observed. | Fuel filter clogged? | Clean or change. | |
| | Air cleaner clogged? | Clean or change. | |
| | Deficient nozzle injection? | Repair or replace the nozzle. | |
| | Incorrect injection timing? | Adjust. | |
| | Engine's moving parts seem to be seizing? | Repair or replace. | |
| Deficient output. | Uneven fuel injection? | Repair or replace the injection pump. | |
| | Deficient nozzle injection? | Repair or replace the nozzle. | |
| | Compression leak? | Replace head gasket, tighten cylinder head bolt, glow plug and nozzle holder. | |

DCA-100SSJU — TROUBLESHOOTING (GENERATOR/ENGINE)

Practically all breakdowns can be prevented by proper handling and maintenance inspections, but in the event of a breakdown, use the tables shown for diagnosis based on the Engine and Radiator Troubleshooting (Table 19) and the MPEC trouble shooting table (Table 20). If the problem cannot be remedied, consult our company's business office or service plant.

| TABLE 19. ENGINE & GENERATOR TROUBLESHOOTING | | | |
|--|--|--------------------------------------|--|
| SYMPTOM | POSSIBLE PROBLEM | SOLUTION | |
| | Dead battery? | Replace battery. | |
| Engine fails to start and starter does not rotated. | Defective starter switch? | Replace switch. | |
| | Fuse F5 burned out? | Replace fuse. | |
| | Broken pre-heat circuit? | Check pre-heat circuit. | |
| Engine fails to start and starter rotates. | No fuel? | Add fuel. | |
| | Defective wiring? | Check wiring. | |
| | Clogged fuel strainer? | Clean or replace. | |
| Engine starts and remains at low speed. | Clogged air cleaner? | Clean or replace. | |
| | Disconnected wiring? | Check and repair wiring. | |
| | No voltage present in AC power source? | Replace rectifier (RE1). | |
| | Defective rotor? | Replace rotor. | |
| Engine speed rises and no voltage is present in AC power source. | Defective voltmeter? | Replace voltmeter. | |
| ··· [····· | Disconnected wiring? | Check and repair wiring. | |
| | Layer short-circuit in armature winding? | Replace armature. | |
| Engine speed rises and AC power | Defective circuit breaker (protector)? | Replace circuit breaker (protector). | |
| voltage is too low or cannot be used. | Layer short-circuit, broken wires in armature winding? | Repair or replace armature. | |
| Engine speed rises and battery | Defective engine regulator? | Replace regulator. | |
| discharges too soon. | Defective wiring? | Repair or replace wiring. | |
| Engine speed rises and engine | Defective alternator? | Repair or replace alternator. | |
| seems overloaded. | Damaged alternator bearing? | Replace alternator bearings. | |

| TABLE 20. MPEC TROUBLESHOOTING | | | |
|--------------------------------|---|--|--|
| Sympton | Possible Cause | Solution | |
| | Low oil level? | Fill oil level. | |
| Low oil pressure light is | Oil pressure sending unit failure? | Replace oil pressure sending unit. | |
| on. | Time delay malfuntion in MPEC? | Refer to dealer. | |
| | Wire shorted? | Inspect/repair wire. | |
| | Low coolant level? | Fill coolant level. | |
| Low coolant level light is on. | Sending unit failure? | Replace sending unit. | |
| | Low battery voltage? | Replace/charge battery. | |
| | Fan belt tension incorrect? | Tighten/replace fan belt. | |
| | Air flow is not circulation through radiator? | Clean/repair radiator grill. | |
| | Doors open? | Close doors. | |
| High coolant temperture | Exhaust leaking? | Replace/repair gaskets or faulty part. | |
| light is on. | Generator being overloaded? | Check/reduce load. | |
| | Thermostat failure? | Replace thermostat. | |
| | Air intake blocked? | Clear all air intakes. | |
| | Temperature switch failure? | Replace temperature switch. | |
| O u seren k liekt is se | No or low Fuel? | Fill fuel level. | |
| Overcrank light is on. | MPEC needs to be calibrated? | Refer to dealer. | |
| | RPM engine speed too high? | Adjust RPM. | |
| O unan and light in an | Governor actuator needs to be adjusted? | Adjust governor actuator. | |
| Overspeed light is on. | Governor controller needs to be adjusted? | Adjust governor controller. | |
| | MPEC needs to be calibrated? | Refer to dealer. | |
| Loss of MPU light(s) or | Magnetic pick up out of adjustment? | Adjust magnetic pick up. | |
| on. | Magnetic pick up dirty? | Clean magnetic pick up. | |

How to read the marks and remarks used in this parts book.

Items Found In the "Remarks" Column

Serial Numbers-Where indicated, this indicates a serial number range (inclusive) where a particular part is used.

Model Number-Where indicated, this shows that the corresponding part is utilized only with this specific model number or model number variant.

Items Found In the "Items Number" Column

All parts with same symbol in the number column, *, #, +, or %, belong to the same assembly or kit.

Note: If more than one of the same reference number is listed, the last one listed indicates newest (or latest) part available.

Effective: July 1, 2000

PAYMENT TERMS

Terms of payment for parts are net 10 days.

FREIGHT POLICY

All parts orders will be shipped collect or prepaid with the charges added to the invoice. All shipments are F.O.B. point of origin. Multiquip's responsibility ceases when a signed manifest has been obtained from the carrier, and any claim for shortage or damage must be settled between the consignee and the carrier.

MINIMUM ORDER

The minimum charge for orders from Multiquip is \$15.00 net. Customers will be asked for instructions regarding handling of orders not meeting this requirement.

RETURNED GOODS POLICY

Return shipments will be accepted and credit will be allowed, subject to the following provisions:

- 1. A Returned Material Authorization must be approved by Multiquip prior to shipment.
- 2. To obtain a Return Material Authorization, a list must be provided to Multiquip Parts Sales that defines item numbers, quantities, and descriptions of the items to be returned.
 - a. The parts numbers and descriptions must match the current parts price list.
 - b. The list must be typed or computer generated.
 - c. The list must state the reason(s) for the return.
 - d. The list must reference the sales order(s) or invoice(s) under which the items were originally purchased.
 - e. The list must include the name and phone number of the person requesting the RMA.
- 3. A copy of the Return Material Authorization must accompany the return shipment.

TERMS AND CONDITIONS OF SALE — PARTS

- Freight is at the sender's expense. All parts must be returned freight prepaid to Multiquip's designated receiving point.
- 5. Parts must be in new and resalable condition, in the original Multiquip package (if any), and with Muiltiquip part numbers clearly marked.
- 6. The following items are not returnable:
 - a. Obsolete parts. (If an item is listed in the parts price book as being replaced by another item, it is obsolete.)
 - b. Any parts with a limited shelf life (such as gaskets, seals, "O" rings, and other rubber parts) that were purchased more than six months prior to the return date.
 - c. Any line item with an extended dealer net price of less than \$5.00.
 - d. Special order items.
 - e. Electrical components.
 - f. Paint, chemicals, and lubricants.
 - g. Decals and paper products.
 - h. Items purchased in kits.
- 7. The sender will be notified of any material received that is not acceptable.
- Such material will be held for 5 working days from notification, pending instructions. If a reply is not received within 5 days, the material will be returned to the sender at his expense.
- 9. Credit on returned parts will be issued at dealer net price at time of the original purchase, less a 15% restocking charge.
- 10. In cases where an item is accepted for which the original purchase document can not be determined, the price will be based on the list price that was effective twelve months prior to the RMA date.
- 11. Credit issued will be applied to future purchases only.

PRICING AND REBATES

Prices are subject to change without prior notice. Price changes are effective on a specific date and all orders received on or after that date will be billed at the revised price. Rebates for price declines and added charges for price increases will not be made for stock on hand at the time of any price change.

Multiquip reserves the right to quote and sell direct to Government agencies, and to Original Equipment Manufacturer accounts who use our products as integral parts of their own products.

SPECIAL EXPEDITING SERVICE

A \$20.00 to \$50.00 surcharge will be added to the invoice for special handling including bus shipments, insured parcel post or in cases where Multiquip must personally deliver the parts to the carrier.

LIMITATIONS OF SELLER'S LIABILITY

Multiquip shall not be liable here under for damages in excess of the purchase price of the item with respect to which damages are claimed, and in no event shall Multiquip be liable for loss of profit or good will or for any other special, consequential or incidental damages.

LIMITATION OF WARRANTIES

No warranties, express or implied, are made in connection with the sale of parts or trade accessories nor as to any engine not manufactured by Multiquip. Such warranties made in connection with the sale of new, complete units are made exclusively by a statement of warranty packaged with such units, and Multiquip neither assumes not authorizes any person to assume for it any other obligation or liability whatever in connection with the sale of its products. A part from such written statement of warranty, there are no warranties, express, implied or statutory, which extend beyond the description of the products on the face hereof.
